

Crypto.com : World's Fastest Growing Crypto App

[Crypto.com](https://crypto.com) exchange was launched in 2016 and is an affordable, all in one crypto-currency platform and it strives to make cryptocurrency a part of everyone's day to day life . As you open the website we will see that crypto.com has already 10m+ users across the globe and supports over 90 countries with a team of 900 members.

So these numbers already says a lot about the company. But that's not it.

- [Crypto.com](https://crypto.com) is selling over 100 crypto-currencies in its platform at its true price.
- It also offers a Visa Card and you can spend with it and get a really good cashback.
- You can do Lending , Staking, Trading, DeFi wallets, DeFi swaps, native CRO tokens and the Crypto.org open-source permissionless blockchain .

So you would have already known that this company has a lot to offer to the crypto users across the globe.

Buy/Sell Crypto with fiat

Not only Bitcoin, Ethereum and other top crypto currencies but crypto.com has 100+ crypto currencies to choose from with 20+ fiat currencies also available to directly trade from.

You can deposit money into your [Crypto.com](https://crypto.com) account via an electronic bank transfer or wire transfer.

Then you can buy and trade the crypto currency that you want directly from your fiat currency.

Low Fees

As already mentioned how you can deposit money crypto.com app but you would be glad to know that there is absolutely no fee in the deposit process

You can also buy and sell cryptocurrencies at a very true cost, and this makes it one of the better exchanges on the market and my personal favorite as well.

First 30 days all the services are free for you after that charges a fee for credit/debit card crypto purchases via its app but other methods of deposit like wire transfer there will be no fee at all.

Earn Interest

Crypto.com is not just an exchange where you can buy sell and trade crypto currencies but you can also build a crypto portfolio here and can earn up to 14% on your crypto assets.

Believe me, its interest rates are better than any one else in the market providing similar services. Even its low level interest rates are better than many companies high yielding saving accounts.

You can do this buy purchasing its own coin **CRO** coin, more CRO you're willing to stake (aka deposit with Crypto.com), the better the benefits. So i would say you will have to keep a lot of your assets in CRO to qualify. You need to stake those CRO coins. The longer you stake your CRO coins higher the benefits you will get.

- If you are able to invest more than 50,000CRO then the returns would be the highest but that amount might not be feasible for many so don't worry there are many other offers for you as well.
- Deposit for a term of three months to get good interests.

One month plan are also available but invest in three months term to get better results.

- If you invest in a stable coin that's why does not change very much with the time opportunities of getting much higher interest will be there and you also will not have to worry about market situations.

Visa Card of Crypto.com

Crypto.com has partnered with the Visa cards and it offers a large variety of Visa cards to choose from. 5 different card types are available here and each have its unique features and benefits.

At the lowest tier, Midnight Blue card holders earn 1% back (which is paid in CRO) and At the highest tier, Obsidian card holders earn 8% back.

Higher tier cards offer even more features such as full reimbursement on monthly subscription fees to services like Netflix, Spotify, Amazon Prime, and more when you pay for the service using your crypto card.

Is your money/crypto safe here ?

After all those features that crypto.com app has to offer i will give you the answer of the most important question for you that is your money safer here. And the answer is **YES !**

Crypto.com has all the essential security features that an

exchange could have like multi-factor authentication and anti-phishing measures.

According to crypto.com security is built into every aspect of its business, and systems are stress tested by leading security firms. It also uses Hacker One, a bug bounty program, to identify weaknesses.

So go ahead in crypto.com and download the app to start your journey in crypto world. And if you are already a part of crypto industry i assure you that now your journey would be much better here. You can visit there website [here](#) as download the app for android or iOS devices.
